

**"Off the same beach you see beginners enjoying sailing for the first time and old timers amazed at just how much fun you can have on a Funboat"**

YVES BELIARD Watersports  
Co-ordinator, UCPA International

Length 3.90m  
Beam 1.25m  
Sail area 4.80m<sup>2</sup>  
Hull weight 70kg  
Capacity 2 persons  
/175kg

Now sailing is for everyone...  
Everyone who wants to enjoy playing on water. Funboat is so easy. If you can ride a bike, then you can sail a Funboat.

**Have you ever sat on a beach, looking longingly at a blue water playground and wishing you were out there?**

Now sailing is for everyone...  
Get ready... it'll take just minutes. Slide the sail along the mast, pop the mast into the boat, the rudder on the back, then you're off. Enjoying every minute... looking back at the beach, at people wishing they were out there with you.

**Just who can sail Funboat?**

If you can ride a bike, you can do it. Age is immaterial. Just like a bike you steer and go... except on Funboat the wind does the work for you.

**How do you get Funboat in the water?**

Simple! A lightweight custom trailer that's easy to manoeuvre. Oh, and even the smallest car.

**So we arrive at the beach. How long does it really take to get going?**

Give yourselves ten minutes. It really is incredibly easy.

**What sort of looking after does Funboat need?**

Well, you can sail Funboat up the beach and not have to worry. She is built to take the knocks year in, year out. As for maintenance, five minutes with a jet wash from time to time will do the job.

**Do I need to store Funboat inside?**

No. You can even leave her outside all year round.

**You accelerate with this**

**You steer with this**

**My favourite Funboat features...**

by Matt Blakestone of Neilson, who is responsible for the 250-strong Neilson fleet.

**The shape**

Funboat's shape means there's lots of stability wherever you sit. Far more than on traditional sailboats. It also means that Funboat slices through the water. There's stacks of room inside.

**The headroom**

The boom is very, very high, which means lots of room underneath and no need to bump your head.

**The shape underneath**

Most small boats have a centreboard that needs to be lowered when going afloat - and raised when coming back. Funboat's unique shape means there's no need for a centreboard. So no hassle leaving or returning to the beach.
